DETAILED ACTION

Specification

Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

The abstract of the disclosure is objected to because it has exceeded 150 words in length. Correction is required. See MPEP § 608.01(b).

Allowable Subject Matter

Claims 1-20 are allowed.

Pertinent Art Cited

The following US Patent Application Publication reveals the current state of the art:

Manhaeve et al. (US 2004/0046576) teach a method, a computer program, and a workstation for analyzing power plane quiescent current measurements performed on a group of integrated circuits, comprising:

reading a plurality data sets, each said data sets containing a plurality of quiescent current values corresponding to a plurality of stimulus vectors of said measurements, where in each of said data sets contains data gathered on a corresponding one of said group of integrated circuits;

selecting one of said stimulus vectors as a reference vector;

computing an estimator of quiescent current for each remaining one said stimulus vectors as a function of reference vector quiescent current level.

Reason for Allowance

The following is an examiner's statement of reasons for allowance:

Pertinent art fails to teach:

Regarding claims 1,8, and 14 the normalizing said quiescent current values in at least one of said data sets by calculating an expected quiescent current value for each of said remaining stimulus vectors and subtracting said expected quiescent current value for each of said remaining stimulus vectors from a corresponding one of said quiescent current values, whereby variations in said quiescent current measurements that are not due to activated defects are reduced and said quiescent current measurements are categorized in ranges of quiescent current levels. It is these features found in the claims, as they are claimed in the combination, that has not been found, taught or suggested by the prior art of record which makes this claim allowable over the prior art.

Claims 2-7, 9-13, and 15-20 are allowed due to their dependency on claims 1, 8, and 14.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2863

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
